To whom it may concern,

After speaking with Yucheng Jiang about his 2022 summer software engineer internship in Apple. I became extremely interested in your Software Engineering Internship position. After doing dozens of projects, teaching Database Systems in University of Illinois, and interning in Uniview Technologies as a backend developer. I have obtained not only cutting-edge technology but also how to well cooperate with other colleagues and help other people succeed.

When new semester begins, there are many UIUC students struggle renting apartments and are often cheated by fake advertisement. To solve this problem and help UIUC students better rent their truly needed apartments in Urbana Champaign area, I independently built the Apartment Rental Application in my free time. I met plenty of obstacles during the development but overcame all the difficulties by the determination of helping the community be a better place and strong programming skills. This semester, I also became a course assistant of *Database System* to listen to the students and help them in their academic performance. This job teaches me being a patient teaching assistant and listen to students' ideas is of vital importance for their success and how to well communicate with professors.

Thank you so much for considering me for this position and I love to discuss these and other qualifications with you. Feel free to contact me if you have any further questions.

Sincerely,

Jiayuan
